EDUCATION

The Pennsylvania State University

College of Engineering

Bachelor of Computer Science (Engineering)

University Park, PA

Graduation Month: December 2026

EXPERIENCE

Fasoo AI

Software Engineer Intern

Seoul, South Korea

June 2026 - Present

- Designed an automated Figma-to-Flutter pipeline that converts structured design data into reusable UI components through token extraction, rule based specifications, and code generation.
- Built a trigger-based CI/CD workflow to detect design library updates and automatically regenerate, validate, and deploy updated Flutter components to an internal shared library.

Republic of Korea Air Force

Aircraft Hydraulic and Electric System Engineer

Jinju, South Korea

September 2022 - June 2024

- Performed troubleshooting and maintenance support for aircraft hydraulic and electrical systems in a safety-critical operational environment.
- Coordinated daily readiness tasks as squad leader for 20+ personnel while following strict documentation, safety, and inspection procedures.

TECHNICAL PROJECTS

AVT Capstone (Autonomous Vehicle Team, SAE Autodrive II)

Guidance, Navigation, and Controls Division

State College, PA

January 2026 – May 2026

- Enhanced CI/CD pipeline in Mathworks Simulation subdepartment; implemented GitLab triggered Simulink automation for model validation and regression testing.
- Developed obstacle aware lane change decision logic leveraging HD maps (PostGIS, ROS2) for autonomous vehicle decision-making.

AI Drone Control System – People Link One (PLO)

Software Engineering Team

State College, PA

January 2026 – May 2026

- Built a real-time drone control pipeline integrating Raspberry Pi, camera, GPU based AI inference, and Pixhawk flight control for autonomous command execution.
- Implemented image capture and transmission pipeline enabling periodic data flow to GPU.

UniGuide AI – People Link One (PLO)

AI/ML Engineering Team Lead

State College, PA

January 2025 - December 2025

- Built automated data generation and model training pipelines using PyTorch, Hugging Face Transformers, QLoRA, and CUDA GPUs.

TAGO Airport Shuttle – CUCO LLC

Co-Founder & Development Team

State College, PA

September 2024 - Present

- Co-founded and deployed a cross-platform ride-sharing app using Flutter and Firebase for Penn State students.
- Led backend development, App Store release, authentication, push notifications, and early user onboarding.
